TRUE SECURITY IS THE KEY TO YOUR PEACE OF MIND.

Provide your customers with the guarantee of a genuine product with

SPC TRUE SECURITY

As counterfeiters are getting more sophisticated, you need innovative techniques to stay ahead of the game. True Security gives your customers the assurance they're getting your genuine product and not a knock-off.

SPC offers low-cost authenticating options that make your product packaging nearly impossible to duplicate. From **UV light** and **braille** techniques to special **patterned foil** and **hidden features**, we can take your brand's product packaging to the next level.

Explore the variety of cost-effective ways SPC can add security to your next package design.

Patterned Foil

Patterned foil security features make your product packaging nearly impossible to replicate. These features also make for eye-catching packaging, elevating your product's value. These custom security techniques can be done inline during the die-cutting or printing process.

Braille

Add unique tactile security features to your product using braille printing. Raised features can be used in either covert or highly visible ways to create a package that is both secure and appealing to the consumer.

UV Light

UV light security features can only be viewed under a UV light, making it subtle and hard to duplicate. These hidden security techniques add a covert layer of protection to your product packaging.
